

## Now available the “ASSETS+ Train the Trainers” e-learning programme

11 May 2023

The European Defence industry employs more than 500,000 people and also supports 1,200,000 jobs indirectly within local economies across Europe. It attracts talented and skilled people to a wide range of careers, from business, engineering, manufacturing and maintenance to cyber, data analytics and more. A career in the Defence sector can take a variety of different paths and offers many opportunities from training to management.

With this in mind, each trainer plays an extremely relevant role and contributes enormously to the successful implementation on a large scale.

The “**ASSETS+ Train the Trainers**” e-learning programme is a **free** and **open** course that will allow trainers to cover different topics and to address students from lower to higher education levels by applying a common methodology which has been developed during the ASSETS+ Project and adjusted to the specificities and needs of the Defence sector.

The programme also includes a pedagogical approach and a guided tour of European tools such as **ESCO (European Skills, Competences, Qualifications and Occupations)**.

In order to learn from experiences and to have a first-hand overview, we have prepared some use cases that will allow you to get a better understanding of the design and implementation of each course. These experiences are diverse: from different countries, different topics and focused on different trainees, offering the widest range of possibilities and examples to take and incorporate into the trainer’s reality.

The course is available on the ASSETS+ website: <https://assets-plus.eu/train-the-trainers-e-learning-programme/>

### The ASSETS+ project

The Alliance for Strategic Skills addressing Emerging Technologies in Defence (ASSETS+) is a four year **Erasmus+ project**, built on close collaboration between Defence Industry, Sectoral Organisations, Higher Education Institutions, Vocational Educational & Training providers and Research Centres, with 30 partners from 8 countries and a broader ecosystem of stakeholders.

ASSETS+ aims to build a sustainable human resources supply chain for the European Defence Industry, that boosts innovation by both attracting highly-skilled young workers and upskilling its employees. Complementary education & training programmes are addressing the following main technologies: Artificial Intelligence, Robotics, C4ISTAR\* and Cybersecurity.

(\*) C4ISTAR is an acronym for Command, Control, Communications, Computers, Information/Intelligence, Surveillance, Targeting Acquisition and Reconnaissance
